1st Delivery

	Aspect	Description	Missing (0)	Innadecuate (1)	Poor(2)	Borderline (3)	Good(4)	Excelent (5)
1	Definition of the project	<i>Social relevance: Present the arguments of importance of the issue selected based on the specifics of the research/team knowledge/networking/. What are the sources or evidence your proposal it could be considered a social issue?</i> <i>Innovation: Considering the approach for the selected issue/topic. How it could be considered "different" compare to the previous experiences/developments?</i> <i>Feasibility: What are the arguments to guarantee the development of project will be successful? What are the strengths and weaknesses (pros/cons) of the team? What are the challenges from the point of view of HCI/product?</i>						
2	Project Process: User Research	<i>Researching: Defining data&info required, materials and instruments, analysis, and results</i> <i>Scheduling activities, task/activities assignment, artifacts, products</i> <i>Repository (organization and documentation. Easy to follow the process of the product, activities, main findings, artifacts.</i>						
3	User Modeling	<i>User profiles, Personas and Scenarios. (Based on the user research process. It is clear how the data/info collected were used to create these artifacts. Artifacts are based on the evidence of data collection, analisys and results. There is a definition of principal, secondary users.</i>						
4	Product Requirements	<i>Initial Requirements description. (Functional requeriments, Non Functional requeriments based on HCI/Usability attributes)</i>						
5	Presentation	<i>1st Delivery Presentation (Quality of the materials, information formatting, timing, speech quality)</i>						
6	Collaborative Work	<i>Evidence in the repository for indivual contribution, based on meeting logs, resposabilities, activities, task. Report of individual contribution metric based on objective/quantificable elements). It contains esencial elements of a "process development product".</i>
